

A new way to recycle Hillebrand Flexitanks in New Zealand

Hillebrand Flexitank are 100% recyclable using mechanical technology.
Here we explain in a step-by-step process on how to recycle them through Hillebrand New Zealand.

Hillebrand's new recycling procedure:

1. Prepare the Flexitank for transit to recycling depot:

- Once the Flexitank has been fully discharged, removed from the container and completely drain the residue
- Fold and load onto a single pallet (x 1 Flexitank per pallet only)
- Secure the Flexitank on the pallet to ensure a safe load & transit
- Clearly mark/label the pallet with the Hillebrand File Reference or new order number for processing & billing.

2. Once the Flexitanks are loaded & secured, contact v.skoric@hillebrand.com and please Indicate:

- Number of Flexitanks to recycle
- Original file reference(s), e.g. AUA-NZA-2011-0001
- Pick up location, timing and contact details (If you need technical guidance and support on this process, please feel free to contact us)

3. Hillebrand will arrange collection and will liaise directly with the recycling depot regarding delivery

4. Hillebrand will generate an invoice indicating each file reference

Example of a correctly packed Flexitank, ready for collection and delivery to our recycling depot. One Flexitank per pallet rolled and its volume is 0.8 - 1 M3 clearly labelled.

Milestones in recycling a flexitank:
